

IT Managed Solutions - Modernising IT Systems

Crusader Ltd

"Our IT systems had served us well for many years, providing us with an excellent return on our original investment, and very little interruption to our business.

Although reliable, our hardware was very long past warranty support and the software releases we were running were no longer being maintained by the manufacturers. We were not experiencing day to day problems but I was well aware of an increasing risk to our business if we experienced a hardware failure and a restriction on how, or even if we could take advantage of the latest software facilities.

Our internal technical team were quite correctly focusing on our customer's needs and it was impossible to justify giving the resource necessary to complete an upgrade ourselves.

Our business continues to grow rapidly, putting demands on our team to deliver services to our customers.

We needed to address two things:

1. To modernise our systems to bring them up to date, within current supported versions but most importantly we wanted to ensure a much higher level of resilience and continuity for our own business.
2. To engage with a trusted IT Partner who could become an extension of our business and help reduce the pressure on our own people, allowing them to continue to concentrate on our customers.

Anderson IT Management were able to meet our objectives and have seamlessly become part of our business as a trusted advisor and support team.

We have modernised our IT systems and we are seeing a steady improvement in our productivity and as a result have minimised the risk to our business.

Anderson IT Management provided cost effective professional advice and support and continue to provide ongoing management with minimal impact on our day to day operations"

Keith Soden Barton
Managing Director

Updating your IT Systems

Are your systems showing signs of age, or not providing you with the flexibility that your business needs to remain effective.

Are you minimising your risks by adopting the right level of protection and resilience for your IT systems.

Anderson IT Management can provide you with the guidance and help you need to build efficient IT systems that reduce risk and lower the cost of IT management.

We take care of IT, while you take care of business

Anderson IT Management has built a reputation on creating solid long-term relationships with our customers and our business partners. Our attitude is to “do whatever it takes” in delivering a highly regarded customer service.

Our priority is building the trust of our customers. We become part of your business journey by helping you develop and manage your IT systems so that they align to your needs at all times.

With Anderson IT Management, you are in safe hands. Our ethics and approach to clients revolves around our motto - “we take care of IT, while you take care of business.”

David Anderson
Managing Director

Keeping IT simple

The key drivers for IT systems in business today is simplicity of use and uninterrupted access to your information.

Our services are geared around this and provide you with;

- Reliable IT systems, built on reputable industry recognised solutions
- Safe and reliable Data Protection solutions
- Secure Hosted facilities for Private Cloud and Disaster Recovery
- Virtual Desktop Infrastructures, for efficient and complete flexible working

Securing your information

Access to your information is the number one priority for any business. Your information needs to be;

- Accessible from any location, allowing you to be flexible and competitive
- Private and Secure
- Recoverable in the event of failure or data loss

We provide our customers a highly secure, safe and accessible location for live IT systems, off-site backup or a complete DR facility.

We have two independent Data Centre locations in the Midlands and London, providing you with Co-Location server hosting, Internet services and voice communications.

More than just backup

Data protection is more than just backup, it is the storage, location, retrieval and security of a crucial business asset.

Using leading industry backup products, combined with stringent management checking procedures - we ensure your data is safe and recoverable, at all times.

Virtual Computing - Energy efficient, and incredibly versatile

Virtual Computing provides many benefits for all types of businesses and should be the primary foundation of your computing platforms.

Building a virtual computing infrastructure is not just for the large enterprises. It works for small businesses with only one server and also benefits the individual computer user who is looking for bespoke but reliable access to their applications, wherever they are working.
