

Secure Data Protection for Business

Touch Design

“As a design agency we deal with large photographic and video files, not to mention the actual design files we create for our clients campaigns.

If we lost these files our business would fail. We decided to invest in secure back up from David and his team at Anderson IT Management to feel reassured that a daily back up of our files was happening. We were very glad we did because the worst case scenario did happen. We had a major computer failure which resulting in all files in our studio being lost.

Once we got passed the initial panic we called David who was very calm and reassured us that his team could put it right. By the next morning we had all our files back on a new machine and were able to continue offering our clients an uninterrupted service.

I took my data for granted and did not realise that I needed Anderson IT management until something went wrong. I am eternally grateful to David and his team for keeping me in business.”

Allow us to help protect your business

More than just back up

Protecting data is more than just back up, it is about the continuity of an organisation in the event of a system outage or data loss. Consideration is therefore needed for how much storage is needed for backup and where backup data is located and importantly it is all about the retrieval and security of a crucial business asset.

The security of your information is our primary concern. We manage our customer's data protection procedures and our processes are water tight.

Anderson IT Management have built an enviable reputation in delivering expertise and technical skills in modern day computing, secure data protection and trusted IT management services.

We help you design and build reliable IT systems, either at your own premises or hosted within our secure Data Centres, ensuring your data remains available at all times, private, secure and recoverable should you suffer data loss.

We take care of IT, while you take care of business

Anderson IT Management has built a reputation on creating solid long-term relationships with our customers and our business partners. Our attitude is to “do whatever it takes” in delivering a highly regarded customer service.

Our priority is building the trust of our customers. We become part of your business journey by helping you develop and manage your IT systems so that they align to your needs at all times.

With Anderson IT Management, you are in safe hands. Our ethics and approach to clients revolves around our motto - “we take care of IT, while you take care of business.”

David Anderson
Managing Director

Keeping IT simple

The key drivers for IT systems in business today is simplicity of use and uninterrupted access to your information.

Our services are geared around this and provide you with;

- Reliable IT systems, built on reputable industry recognised solutions
- Safe and reliable Data Protection solutions
- Secure Hosted facilities for Private Cloud and Disaster Recovery
- Virtual Desktop Infrastructures, for efficient and complete flexible working

Securing your information

Access to your information is the number one priority for any business. Your information needs to be;

- Accessible from any location, allowing you to be flexible and competitive
- Private and Secure
- Recoverable in the event of failure or data loss

We provide our customers a highly secure, safe and accessible location for live IT systems, off-site backup or a complete DR facility.

We have two independent Data Centre locations in the Midlands and London, providing you with Co-Location server hosting, Internet services and voice communications.

More than just backup

Data protection is more than just backup, it is the storage, location, retrieval and security of a crucial business asset.

Using leading industry backup products, combined with stringent management checking procedures - we ensure your data is safe and recoverable, at all times.

Virtual Computing - Energy efficient, and incredibly versatile

Virtual Computing provides many benefits for all types of businesses and should be the primary foundation of your computing platforms.

Building a virtual computing infrastructure is not just for the large enterprises. It works for small businesses with only one server and also benefits the individual computer user who is looking for bespoke but reliable access to their applications, wherever they are working.
